

ARAC 5 production software

From data input to production tasks

The ARAC 5 software has been developed as a user-interface and control-software for KRAMENDONK automation equipment. ARAC 5 is capable of distributing production tasks among various robots as well as additional systems on the shop floor.

Production without programming

ARAC 5 takes control of the total process. The powerful software enables the operator to focus on his production tasks, without worrying about robot programming. With the ARAC 5 software and its additional modules, large automation systems can be controlled by a single operator.

Smart robotics

Efficient work distribution

The software's efficient work distribution helps to ensure that each task is completed in a timely manner, allowing for a smoother workflow and a more productive work environment.

User-friendly interface

Its intuitive design and clear visualizations provide quick access to important information, allowing operators to make decisions with ease. With its simple and straightforward design, ARAC 5 reduces the need for extensive training.

Real-time adaptation

ARAC 5 software utilizes real-time adaptation to ensure accuracy. Taking into account even the deviations in connecting steel profiles. ARAC 5 avoids collision regardless of where the workpiece is placed within the working area. This helps resulting in a flawless final product.

Production centric

By adopting a production-centric approach, the software streamlines the entire production process and reduces the chances of errors and inefficiencies. This results in an increased output of high-quality products.

Quality control reports

Item	Series	Duration	Adverse Effect
20 MCR_100	T000	0:01:31	
21 C8	T000	0:02:32	
22 C8	T000	0:02:49	
23 C4	T000	0:02:41	
24 C2	T000	0:02:40	
25 C3	T000	0:02:40	
26 C4	T000	0:02:49	

Quality control reports provide detailed information about the quality of the production, including any deviations or issues that may have arisen during the process. This information can be used to improve the production process for future reference and analysis.

Streamline your production process

ARAC 5 is designed to streamline the production process and increase efficiency. It focuses on real-time adaptation and precision, ensuring a flawless final assembly.

Get the most out of your equipment with our additional Management Dashboard

Real-time data monitoring saves time and money by means of continuous and historical system performance measurement so that you can act on underlying issues before they have an adverse effect. Prevention is better than cure!
